GRAY SKY II for Brass Quintet and Tape

by

Young-Hwan Yeo, B.M.; M.M.

Dissertation

Presented to the Faculty of the Graduate School of

The University of Texas at Austin

in Partial Fulfillment

of the Requirements

for the Degree of

Doctor of Musical Arts

The University of Texas at Austin

December, 2003

Dedicated to my beloved mother

Acknowledgements

GRAY SKY II for Brass Quintet and Tape would not have been possible without the help of Dr. Russell Pinkston, who provided me with much advice. The Committee has given valuable guidance and critical commentary for this dissertation. I am very grateful for the support of the following committee members: Dr Russell Pinkston, Dr. Kevin Puts, Prof. Leonard Johnson, Dr. Timothy Lovelace and Prof. Andee Scott. I would also like to thank my friends, Seil Oh, John Lato, David Hainsworth, Christopher Staefe, Per Bloland, Ryan Beavers, and Stephen Wray.

GRAY SKY II for Brass Quintet and Tape

Publication No._____

Young-Hwan Yeo, D.M.A.

The University of Texas at Austin, 2003

Supervisor: Russell Pinkston

GRAY SKY II is composed for Brass Quintet and Tape in one movement. The composition is approximately fourteen minutes in duration. A primary feature of this piece is the live interaction between the acoustic brass instruments and the electronically generated accompaniment. Some of the electronic sounds were created using a program written in the Csound computer language; sampled sounds and the Kurzweil K2000 synthesizer were processed with GRM Tools using Pro Tools software. The samples of the inside strings of a piano, bells, and muted brass instruments were either recorded with a portable DAT recorder or extracted from a CD of samples.

Table of Contents

Introduction

GRAY SKY II is composed for Brass Quintet and Tape in one movement. The composition is approximately fourteen minutes in duration. A primary feature of this piece is the live interaction between the acoustic brass instruments and the electronically generated accompaniment. Some of the electronic sounds were created using a program written in the Csound computer language; sampled sounds and the Kurzweil K2000 synthesizer were processed with GRM Tools using Pro Tools software. The samples of the inside strings of a piano, bells, and muted brass instruments were either recorded with a portable DAT recorder or extracted from a CD of samples.

Formally, this composition can be divided into five sections in a large scale. The overall structure is mostly developed through my intuitive approach, and from the following abstract idea: Sometimes, people enjoy contemplation. One of the reasons for this is to temporarily escape from the monotony and rigidity of reality, and to reach fulfillment through their imagination. The impulses and true emotions reached through this contemplation are not readily unearthed in our daily lives.

The tape must be performed using an Alesis ADAT; channels 1 and 2 are needed to achieve a stereo mix, and channel 8 is needed as a beat track to indicate exact starting points and pickup beats for live performers. The complete list of equipment required for performance is one ADAT player, at least four loudspeakers, one mixer, two microphones, and five sets of headphones.

A Descriptive Analysis

The analysis portion of this dissertation describes the musical events and contents of the composition in detail according to the order of the formal structure. The entire formal structure was mostly developed through an intuitive approach inspired by the abstract idea of the fragments of our hidden emotions and inner lives gradually developing in complexity, and building to a climax the moment at which we submerge into contemplation.

The form of composition can be divided into five sections in a large scale: Section A - Section B - Section C - Section C' - Section a'+b'.

This large scale formal structure is illustrated in Example 1:

Section	**A**	**B**	**C**	**C'**	**a'+b'**
Instrumental features	Inst. only	Inst. with Tape (Transition)	Inst. with Tape	Inst. with Tape	Inst. with tape (Codetta)
Page number	1-4	5	6-10	11-21	22-23

Example 1. Entire formal structure

Each of these five sections has a strong, distinct characteristic, expressing the gradual shift from regularity to a desired change. Section A consists of only acoustic

textures with no tape; Section B features the tape part interacting slightly with the live instruments, which are using aleatoric gestures.

In Section B, I used many sound samples from the brass instruments, as well as the inside strings of a piano; the reason for this was not only to create a musical continuity, but to build a timbral connection between Sections A and C. Both Sections C and C' show the live interaction between the instruments and tape more prominently than Section B. The main function of Section B, then, is to serve as a transition between Sections A and C. It also represents the transformation from reality to contemplation. The last section, a'+ b', is a codetta, which expresses the journey back to everyday life.

At the beginning of section A, I attempt to describe the regularity of everyday life; monotonous and mundane activities at the workplace are represented by a relatively conventional style of writing. The opening fanfare is presented by the two trumpets, horn, and trombone in mm. 1-4 (Example 2).

Example 2. Opening fanfare

The principal theme, expressing the regularity of daily life, is given in mm. 7 to 9 by the tuba. It is often transposed, transformed, minimized, expanded and gradually moved to other voices by contrapuntal means (Examples 3, 4, and 5).

The principal theme consists of a long phrase containing the melodic intervals major 7th, major second, and perfect 4th.

Example 3. The principal theme of Section A (mm. 7-9)

Example 4. Contrapuntal features (mm. 7-13)

Example 5. Transformed melodies from the principal theme (mm. 29-33)

A climax occurs at the end of Section A from mm. 34, consisting of transformed melodies derived from the principal theme, which are presented contrapuntally, and accompanied by interesting timbres created by the two muted trumpets. This leads into the transition, Section B. The most interesting feature in mm. 36-46 is the melodic links between instrumental voices. Not only can these transformed melodies be linked with the thematic materials in other voices from the beginning of the piece, but they also create contrapuntal gestures at this point. The sound from the two muted trumpets in mm. 36-39 supports the sounds of the transformed melodies from the principal theme with an interesting color, obtained through the use of microtones and flutter tonguings. The tempo of Section A begins to increase from the second beat of m. 40, accelerating into cacophonous rhythms in m. 43, just before the beginning of Section B.

Example 6. Beginning of Climax in Section A (mm. 34-39)

In the one transitional section of this piece, Section B, I express the features of a complete about-face from reality to the fragments of our suppressed thoughts through the use of electronic sound. The standard musical development of the acoustic instruments is connected with the new electronic sounds, leading to the "hidden emotions" of Sections C and C'.

Section B begins with three high-pitched metallic sounds, which very gradually change timbres and pitches. First of all, although the instruments play aleatoric materials, the duration is fixed by the tape. After the pickup beats, at approximately 1'55", the brass instruments enter with aleatoric gestures; this continues for one minute until the beginning of Section C. The total duration of Section B is 2'55".

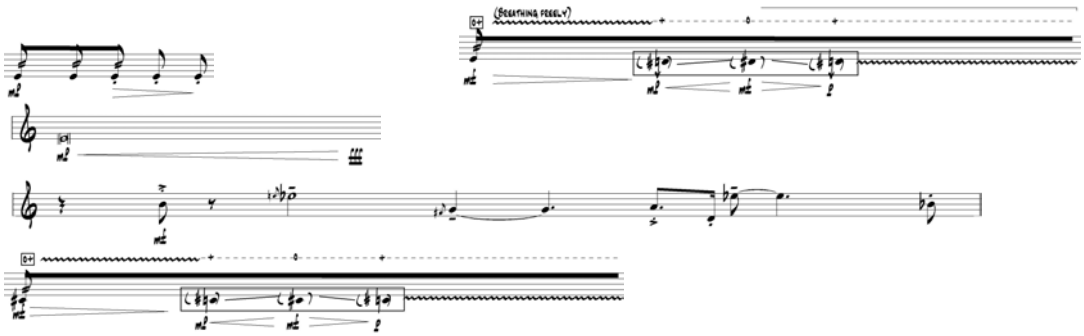
Example 7 shows the entire wave form extracted from Track 1.wav (ADAT: Mark 1) and note to the performers of Section B.

<B>

- Diagram of Section B (Amplitude & Duration) -

<Note to the performers: For muted two trumpets>

- Aleatoric box gestures -



1. The starting point of section B needs to coincide with the first beat of measure 46 in section A.
2. Start aleatoric gestures after the pickup beats; it is not necessary to begin with the first box.
3. After the pickup beats, at approximately 1'55", the brass instruments enter with aleatoric gestures.
4. Section C needs to begin immediately after the pickup beats.

ATTACA

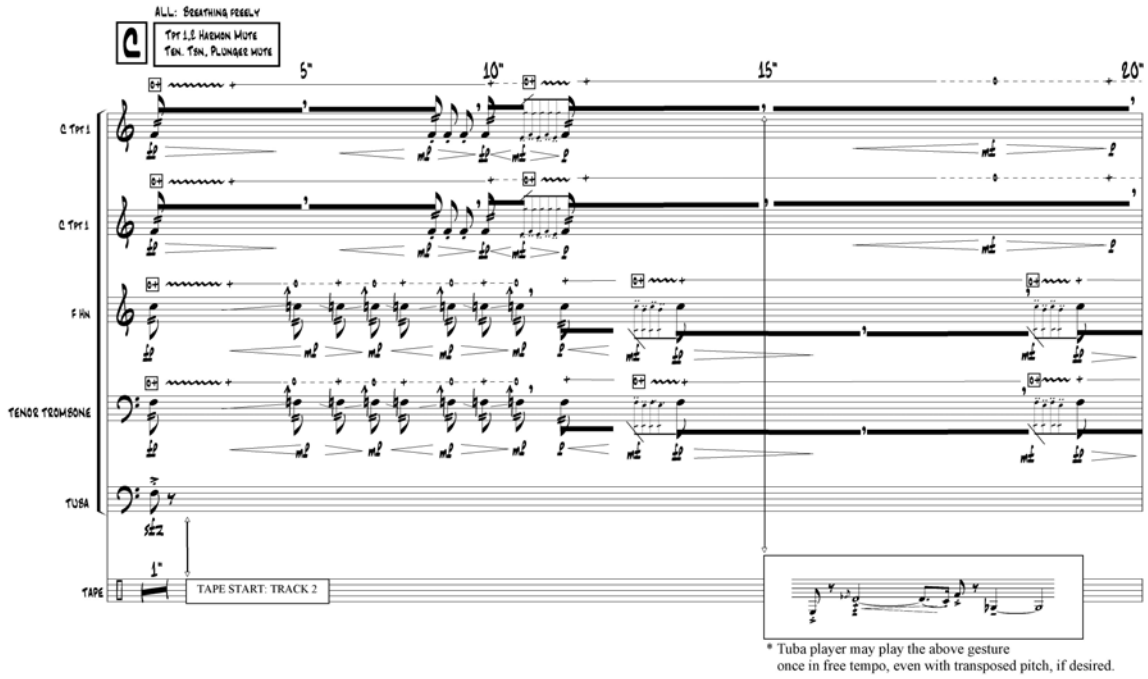
Example 7. Section B

The appearance and development of our complex hidden emotions are portrayed by Section C. In order to express this, I used irregular, unexpected timbres and a more abstract musical language. Section C consists of completely different elements, timbres and voice textures than Section A. While the first section utilizes a more conventional style of writing and the familiar colors, Section C uses no meter, tempo, key signature, or exact rhythms, and sometimes contains a restricted pitch range. Players can perform this section freely, because it is based on approximate durations in seconds instead of meters. This structural freedom, as well as the use of harmon, plunger and whisper mutes to create distinctive timbres, is necessary to represent the abstract concept of this piece. I provide detailed special notes to the performers explaining how to create these timbres for Section C.

	Flutter tonguing.
	Flutter tonguing gradually slowing to individual notes.
	(Mute) closed, then suddenly opened at o
	As above, but gradually changed from closed to open.
	Rapid alternation of open and closed, not synchronized with tonguing.

Example 8. Note to the Performers

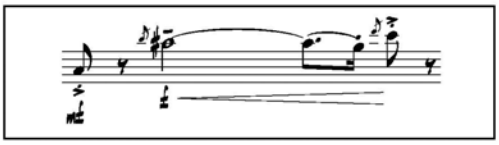
Section C is comprised of a totally free compositional aesthetic. Full muted brass instruments sustain an F for approximately 35” with interesting colors. The intervals between the instrumental voices alternate, shifting between relaxation and tension; the primary intervals used are the unison, minor second and major second.



Example 9. Beginning of Section C

Although the voices are centered on a unison F, they all use microtones, changing dynamics and articulations to add an interesting complexity and variety to the sustained pitch. At a point 15” and 25”, two melodies from Section A appear as an aleatoric gesture, acting as a reminder of the monotony and rigidity of reality, but new timbres from the muted brass instruments emerge to counteract and prevail. The tuba may perform them once in free tempo, and even transpose pitches.

* Tuba player may play the above gesture
once in free tempo, even with transposed pitch, if desired.

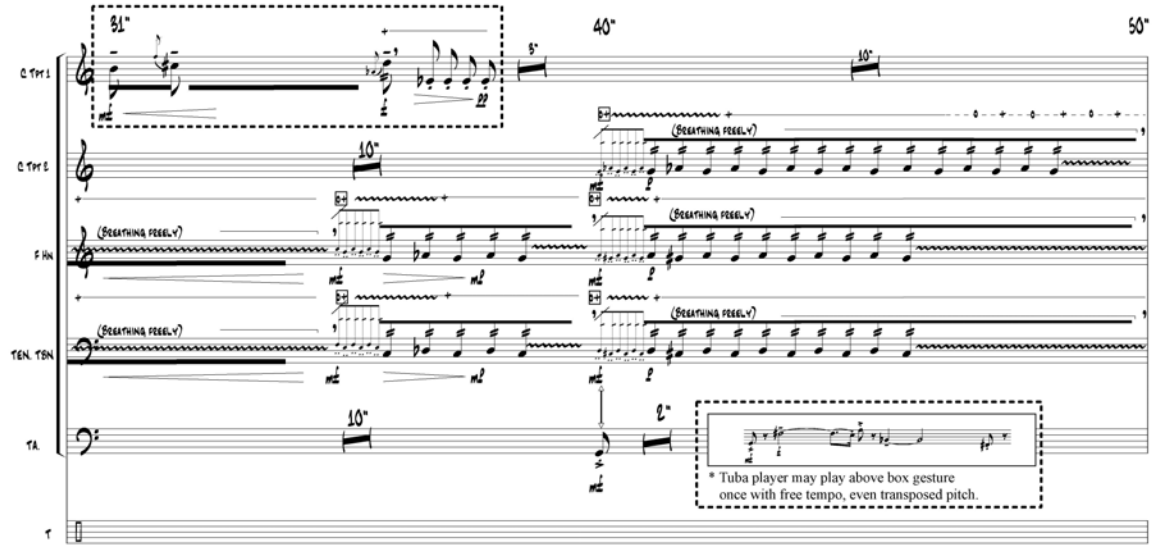


* Tuba player may play the above gesture
once in free tempo, even with transposed pitch, if desired.

Example 10. Aleatoric materials from Section A

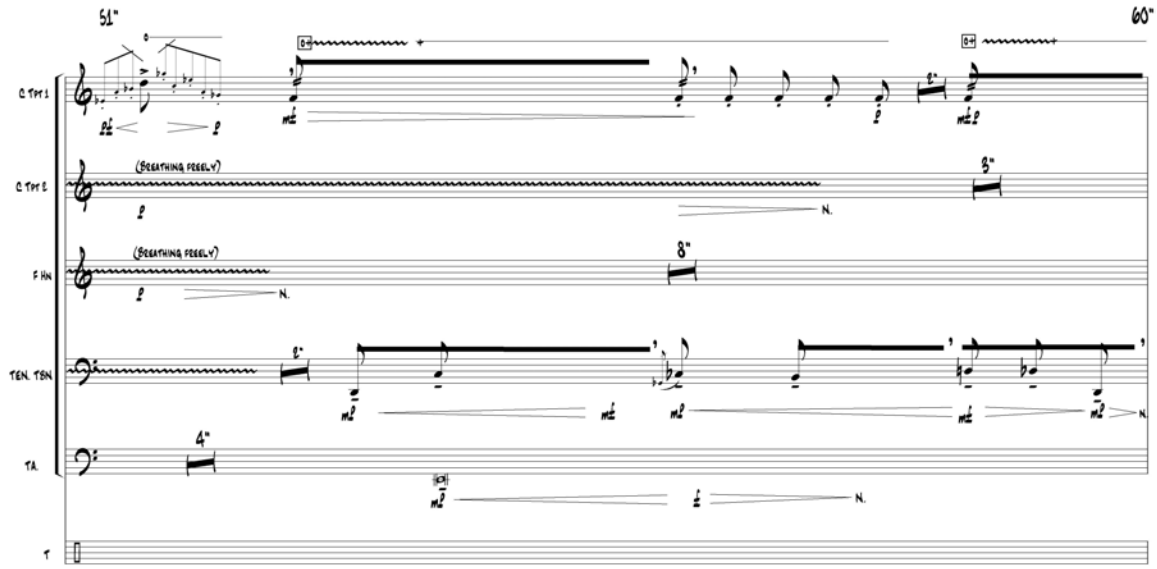
(Approximate 15" and 25" by the tuba)

The principal theme of Section C is performed by the first trumpet player at approximately 30", while the intervallic relationship between the two trumpets and the other voices is changed from unison to a perfect 4th. One of melodies from Section A is performed again by the tuba as a contrapuntal gesture at approximately 40", while the muted trumpet, horn, and trombone create unusual timbres, using the interval of a perfect 4th. An interesting occurrence at this point is that a principal theme of Section C is answered by a melody from Section A in a contrapuntal gesture. All of the melodies used in Section A are notated in aleatoric boxes, to be performed once in free tempo, even with transposed pitch, if desired.



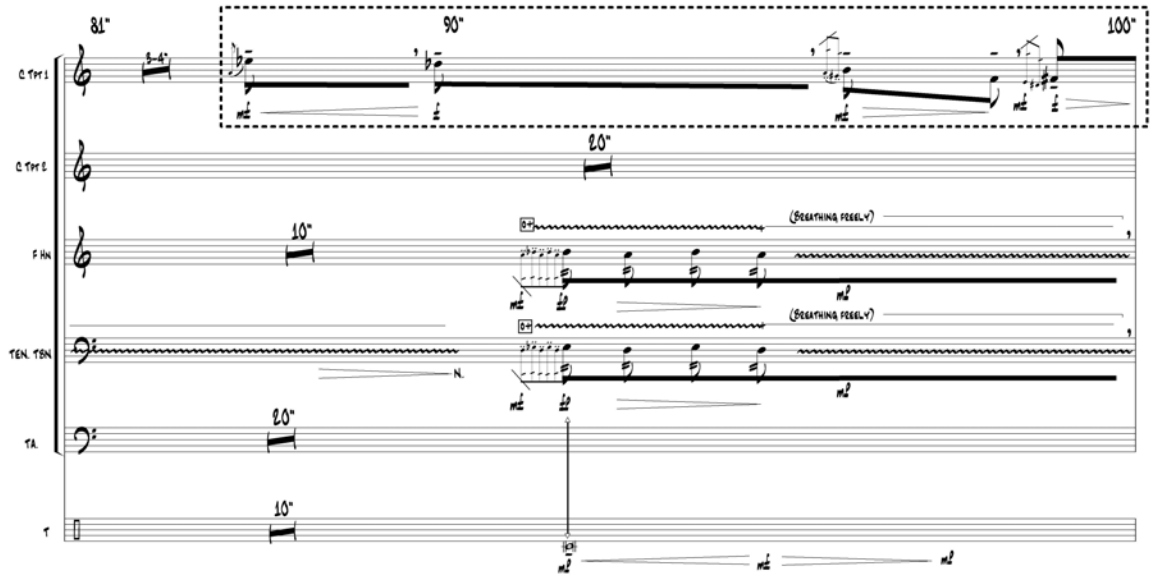
Example 11. The principal theme of Section C

The principal theme, now transformed by the way of rhythmic expansion, is performed by the trombone at approximately 55". It consists of a long phrase containing the melodic intervals minor 7th, minor second, and major 3rd.



Example 12. The expanded melody transformed from the principal theme

The expanded melody transformed from the principal theme is performed by the first trumpet at approximately 85”, with long phrasing. Both the horn and trombone sustain a primary note, E, at the interval of an octave, which is alternated by a semitone and microtone, while the tuba sustains an E at approximately 93”.

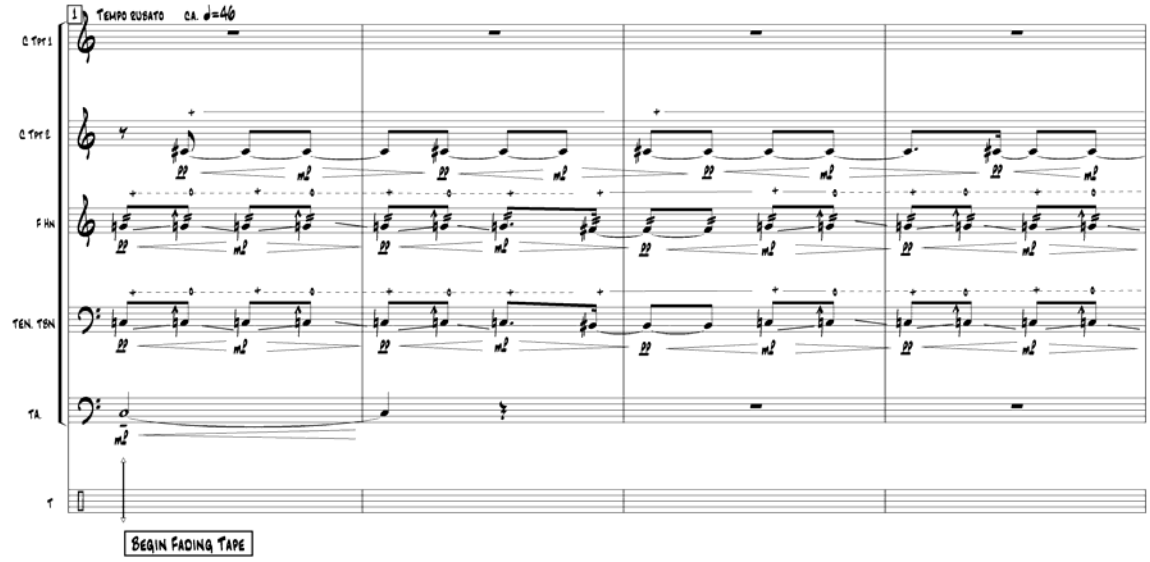


Example 13. The expanded melody by the way of rhythmic expansion

After approximately 120”, a new idea appears in the 2nd trumpet, horn, and trombone.

The new material is an interlude which gradually reaches a climax and consists of many sustained tones by the instruments with fluctuating dynamics.

The second trumpet sustains a unison C#, frequently changing dynamics, while the horn, trombone, and tuba sustain an octave C, also with fluctuating dynamics.



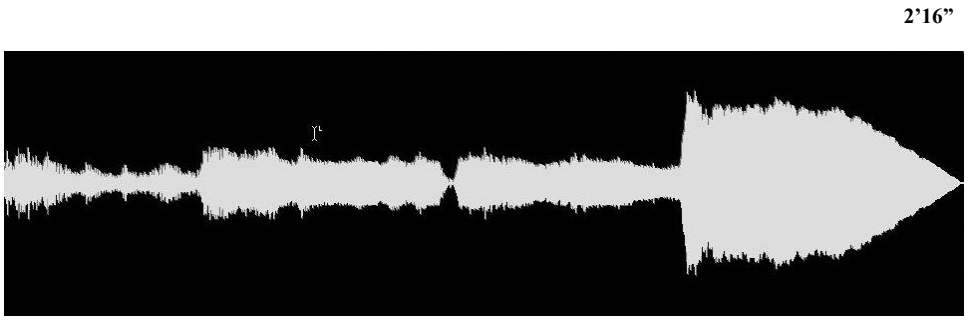
Example 14. New idea area in Section C

After 4 measures of this material, one of the melodies from Section A reappears, this time as an aleatoric gesture.

Example 15. A melody from Section A

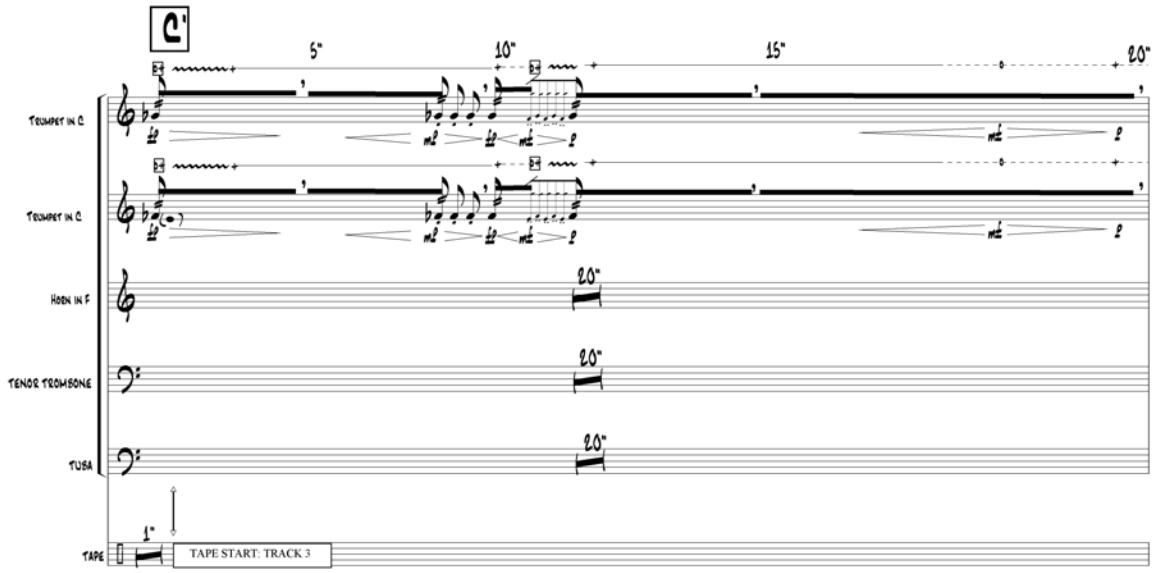
The sound world of Section C is based on the combination of live and pre-recorded sounds. The tape is created using some recorded brass timbres, in order to help create the illusion of live interaction. The instruments need to begin immediately after the pickup beats in Section B and the Tape part must begin at approximately 2" according to the indicated cue. The duration of the instrumental part is approximately 2'00", but the tape part is exactly 2'16". Hence, the person controlling the mixer must gradually fade out the tape beginning at around 2'00". The tape part in Section C supports and adds new color to the sounds of the instruments not only through live interaction, but also by acting as an expansion of one of the brass instruments.

The pitch materials used by the brass in Section C are somewhat limited, but the tape part utilizes a wider range of pitch materials, and adds to the piece through the use of colorful timbres. The primary materials used in the tape part are samples of acoustic brass instruments, percussion, and a Kurzweil K2000 synthesizer, mainly using the same pitch materials as the instrumental part in Section C. The compositional and processing tools used for the tape part include the GigaSampler, Sound Forge, and GRM Tools, especially the five band comb filter (stereo). The diagram below shows entire wave form of Track 2 (ADAT: Mark 2) used in Section C.



Example 16. Diagram of Tape Part (Section C, Amplitude&Duration)

In Section C', I attempted to evoke self-effacement, and the attainment of a spiritual state of perfect selflessness. This section uses more extended musical material than Section C, due to the numerous instrumental voice textures, extended a new idea area, and an added aggressive climax, achieved with aleatoric gestures. In addition, Section C' is transposed a minor second higher than Section C. At the beginning of this section, the two trumpets perform material centered on the pitches Gb and E.

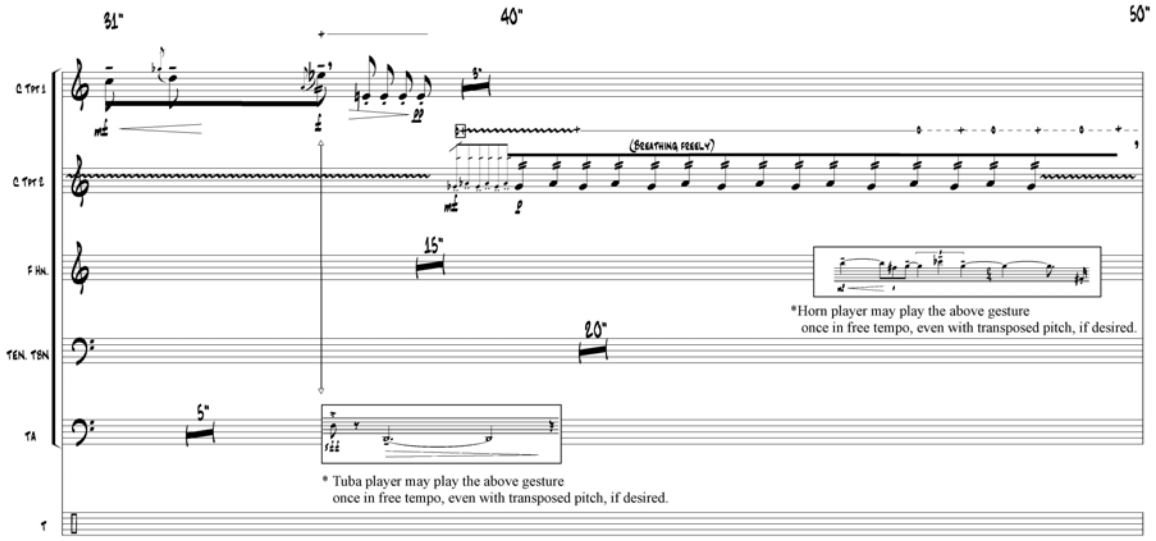


Example 17. Beginning of Section C'

Two melodies return from Section A and are alternately presented one time each, at approximately 20" to 30", while the two muted trumpets create long phrases using the interval of a major second.

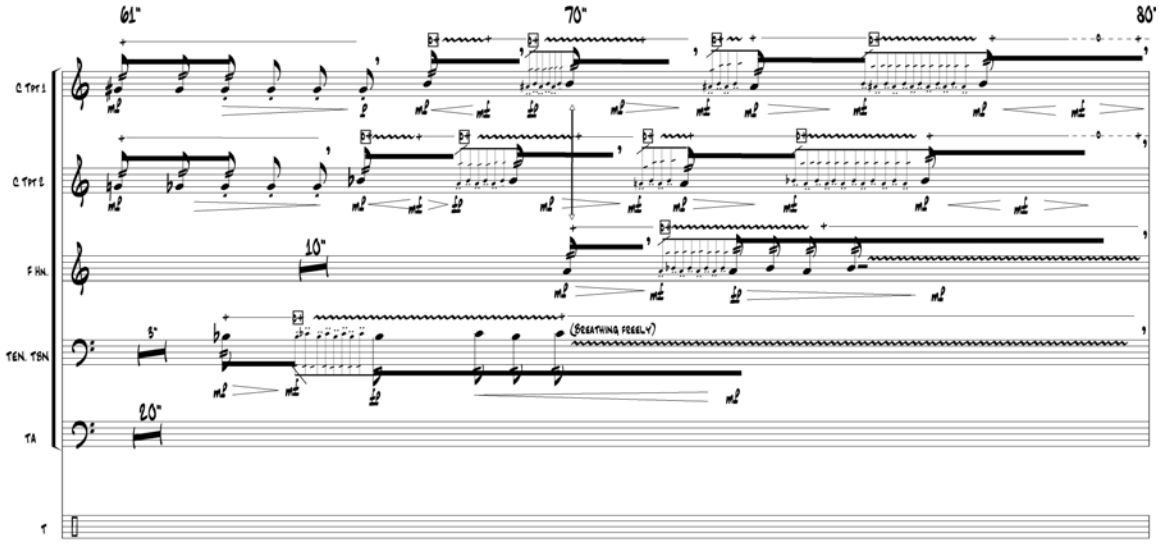
Example 18. Two melodies from Section A

At some point between 30” to 50”, two melodies return from Section A are also performed once each by the trombone and horn, while the principal theme is played by the first trumpet. Following this theme, a microtonal effect is created by both trumpets.



Example 19. The transposed principal theme of Section C’

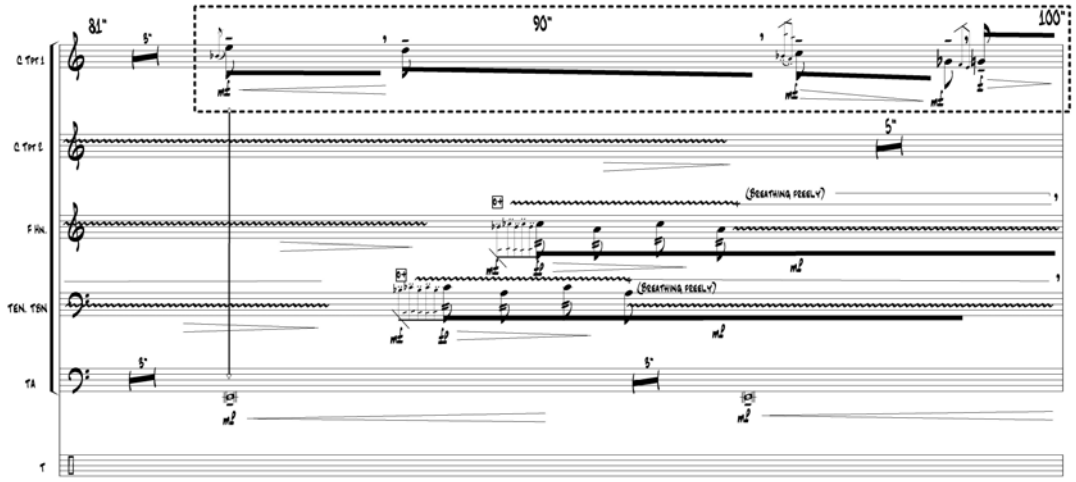
Somewhere between 60” and 80”, all the muted instruments perform various pitches, creating a sense of sonic confusion. The pitches used are D, Eb, Gb (F#), G#, A, Bb (A#), and B. A kind of sound mass occurs at this point; together with the tape part, all the muted instruments are playing these pitches with various grace notes and different breathing points, resulting in surprising colors.



Example 20. Sound confusion in Section C’

The expanded melody from the transposed principal theme is played by the first trumpet at approximately 85” to 100”, while the horn and trombone are sounding a perfect 4th. All instruments, including the tape part, are playing different gestures.

.



Example 21. The expanded melody from the transposed principal theme

After approximately 120", a new texture is created by the brass with long, sustaining tones. This is much more extended than the corresponding area of Section C. The second trumpet sustains C# continuously with frequently changing dynamics, but the trombone is microtonally fluctuating around a central Ab, also with changing dynamics. Meanwhile, the horn plays a melody from Section A in a slow tempo.

Example 22. Beginning of a new motivic area in Section C' (p. 44)

The second trumpet changes the sustaining notes from C# to Eb in m. 5 (p. 45) of the new motivic area, still dynamically fluctuating, while the trombone is moving by microtones around Bb instead of Ab. This time, the tuba plays a melody from Section A with a slow tempo.

Example 23. A new motive area in Section C' (p. 45)

In mm. 1-8 (pp. 44-45) of this new motivic area, the rhythm is quite simple due to the sustained tones of the muted instruments. In m.10 (p. 45), however, new rhythmic gestures appear. After nine measures of long phrases, static rhythms are disconnected by new, irregular rhythms. These new fragmented rhythms accelerate, and appear in all voices by m. 13.

Example 24. The first appearance of new fragmented rhythms (p. 45)

Example 25. Extended new fragmented rhythms (p. 46)

A climax begins at m. 20 (p. 46); prominent at this point are static pitches, consisting of long tones in mm. 1-19, although new fragmented rhythms appear several times.

Example 26. Beginning of a climax (m. 20, p. 46)

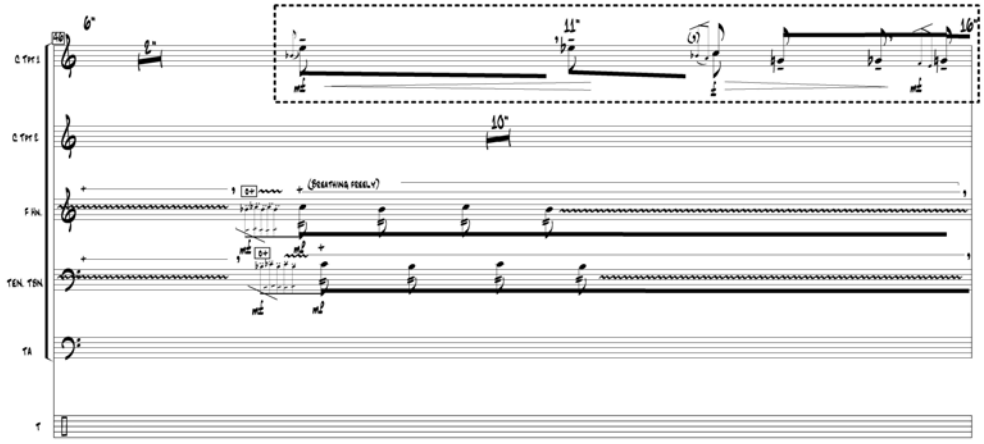
After the beginning of the climax, the pitches gradually move higher to accented tones. New fragmented rhythms alternate with sustained pitches with frequent dynamic changes leading to the first climax, which is achieved through aleatoric gestures. (pp. 46-48)

Example 27. Alternation between new fragmented rhythms and sustained pitches

The first peak point of the climax in Section C' appears at m. 41 (p. 49). Two aleatoric gestures in mm. 41 and 43 are linked by a short bridge in m. 42 to create an unexpected chance element. The brass instruments, focused on high pitches, free rhythmic passages, and retrospective materials from Section A, create two aggressive climaxes within an indicated duration in order to reach the final peak of the composition in m. 44. (p. 50)

Example 28. Climax parts in Section C' (p. 49)

A short codetta starts in m. 45 (p. 50), approximately 35” after the climax. A transformed melody from a melody suggested by the first trumpet at approximately 81”-100” of Section C’ is played by the first trumpet, while sounds are created by other voices in the background.



Example 29. Beginning of codetta in Section C’

A melody from Section A is also presented by the tuba while the other voices sustain microtones for approximately 21” (p. 51).

Example 30. A melody from Section A

The electronic sounds used in Section C' are created by using a program of my own design written in the Csound computer language and transformed sounds from Track 2 used in Section C (ADAT: Mark 2).

Track 3 (ADAT: Mark 3) is composed for live interaction between the instruments and tape. It needs to start at approximately 2" according to the indicated cue. The original pitches of Track 3 are transposed up by a minor 2nd; there are also newly added transformed timbres and pitches from a Kurzweil K2000 and various samples. As in Section C, the total duration of track 3 is exactly 2'16". As before, the person in control of the mixer should fade out the tape after approximately 2'00".

Track 3 supports the brass instruments not only through live interaction, but also by the use of an expanded, set of timbres in comparison with track 2. Track 3 also makes interesting colors when mixed with the sounds of the instruments, though it does not imitate brass sounds. The diagram below is the acoustical of Track 3.wav. (ADAT: Mark 3)

Example 31. Diagram of Track 3 (Amplitude & Duration)

Track 4 (ADAT: Mark 4) uses a transformed sound from Track 2 used in Section C and Granular synthesis[1], which is created by Csound[2], on samples of brass instruments. A sound from track 4 supports the sonic confusion of the live instruments reaching the peak point of the composition (m. 44, p. 50), which is 26" in duration. Track 4 was generated with GRM Tools using Pro Tools software, especially the five band comb filter (stereo) and Csound, using Track5.orc and Track5.sco. (See Appendix).

The diagram in Example 32 is the wave form of Track 4.wav.

Example 32. Diagram of Track 4 (Amplitude & Duration)

The last section of the piece, Section a'+ b' (pp. 52-53), is a short codetta created by combining minimized versions of Sections A and B. This codetta represents the point at which our desires and hidden emotions give way to the reality of daily life. The

[1] ***Granular synthesis*** is the development of thousands of short sonic grains combined linearly to form large-scale audio events; it was first suggested by Iannis Xenakis and Curtis Roads as a computer music technique to compose fresh electronic sounds. The grain is a unit of sonic energy possessing any waveform, with a typical duration of a few milliseconds, near the threshold of human hearing. It is the continuous control of these small sonic events that gives granular synthesis its power and flexibility.

[2] ***Csound*** is a programming language designed and optimized for sound rendering and signal processing. The language consists of approximately 450 opcodes. It is necessary to create two text-based files to generate sound - an orchestra, ("instruments") file and a score, ("notes") file.

instrumental part is minimal in comparison with Section A, and is transposed up by a major second.

Section a'+ b' has no opening fanfare as in Section A. It begins with a unison E, played by all instruments except for the two muted trumpets. The principal theme appears in mm. 4-6 by the tuba, expressing the monotony of everyday life. As in Section A, it is transposed, transformed, minimized, expanded, and contrapuntally moved to other voices.

Example 33. Beginning of Section a'+b' (p. 52)

The most interesting feature in mm. 12-20 (p. 53) is the melodic dovetailing between instrumental voices. Not only can these melodies, which are transformation of the principal theme, be linked with the melodies in other voices from the beginning of the piece, but they also create unique sound when combined at this point in the composition.

Example 34. A contrapuntal gesture (mm. 12-16, p. 53)

The tape part in this section (ADAT: Mark 5) is derived from Section B, and uses samples of a Kurzweil K2000 and the inside strings of a piano, manipulated with GRM Tools - specifically, Delay 24 (stereo) and Freezing (stereo). This part has a different timbre than track 1.wav, but it is based on the same samples to maintain musical continuity. It must start at the end of Section C' according to the indicated cue. The duration of track 5 is exactly 1'00". The diagram below is the entire wave form extracted from Track 5.wav.

1'

Vita

Young-Hwan Yeo was born in Taegu, Korea on May 6, 1972, the son of Han-Dong Yeo and Hye-Sook Kim. He holds a Bachelor of Music degree in Composition from Kyungpook National University, where he graduated in February, 1999, and a Master of Music degree in Composition from the University of Texas at Austin, received in May 2001. Mr. Yeo is currently an Assistant Professor in Computer Music and Composition at Cheonan University, Korea.

Recently, he was the second winner at the 2001 Young Composers' Competition of the National Association of Composers, USA. His electro-acoustic music has been selected and performed frequently throughout Korea, Europe, and the United States. Mr. Yeo was nominated as a recipient of the 2001-2002 Womack Endowed Presidential Fellowship by the faculty of UT-Austin on October 2001.
